1 Introduction

WanderLust is a modern, user-centric booking platform that connects tourists and property owners. It is designed to meet a variety of demands and provides customers with a seamless experience when searching for accommodations ranging from fancy hotels to comfortable apartments. WanderLust offers a variety of options to meet your needs, whether you're looking for a relaxing vacation, a business trip, or a one-of-a-kind travel experience. The portal allows hosts to easily list their properties, whether they run a huge, prestigious hotel or a tiny flat that they want to rent out temporarily. Travelers, on the other hand, benefit from an easy-to-use interface that allows them to search by location, read thorough descriptions, and book with a few clicks. WanderLust is designed to make vacation planning easier, more accessible, and customized. It seeks to establish a community-driven environment in which property owners and guests collaborate to produce unique and memorable experiences. WanderLust prioritizes convenience, inclusiveness, and variety to guarantee that everyone, from budget travelers to luxury seekers, may discover their ideal stay.

2 Goals and Objectives

- Simplify the booking experience for travelers.
- Hosts can list their properties on the platform.
- Hosts can include both large, luxurious hotels as well as apartment owners looking to rent out their space temporarily.
- The platform is designed to be easy and accessible for both travelers and hosts.

3 Target Audience

WanderLust's target audience comprises travelers looking for a variety of housing options as well as hosts willing to sell and monetise their homes, which range from individual flats to luxury hotels.

4 Key Features

4.1 Navigation Bar

- Logo of the website which is clickable that routes to Home page
- Search option: User can search the website by their desired location
- User Information: A button with user information that navigates to Account page if the user is logged in, otherwise the button will guide the user to Login Page

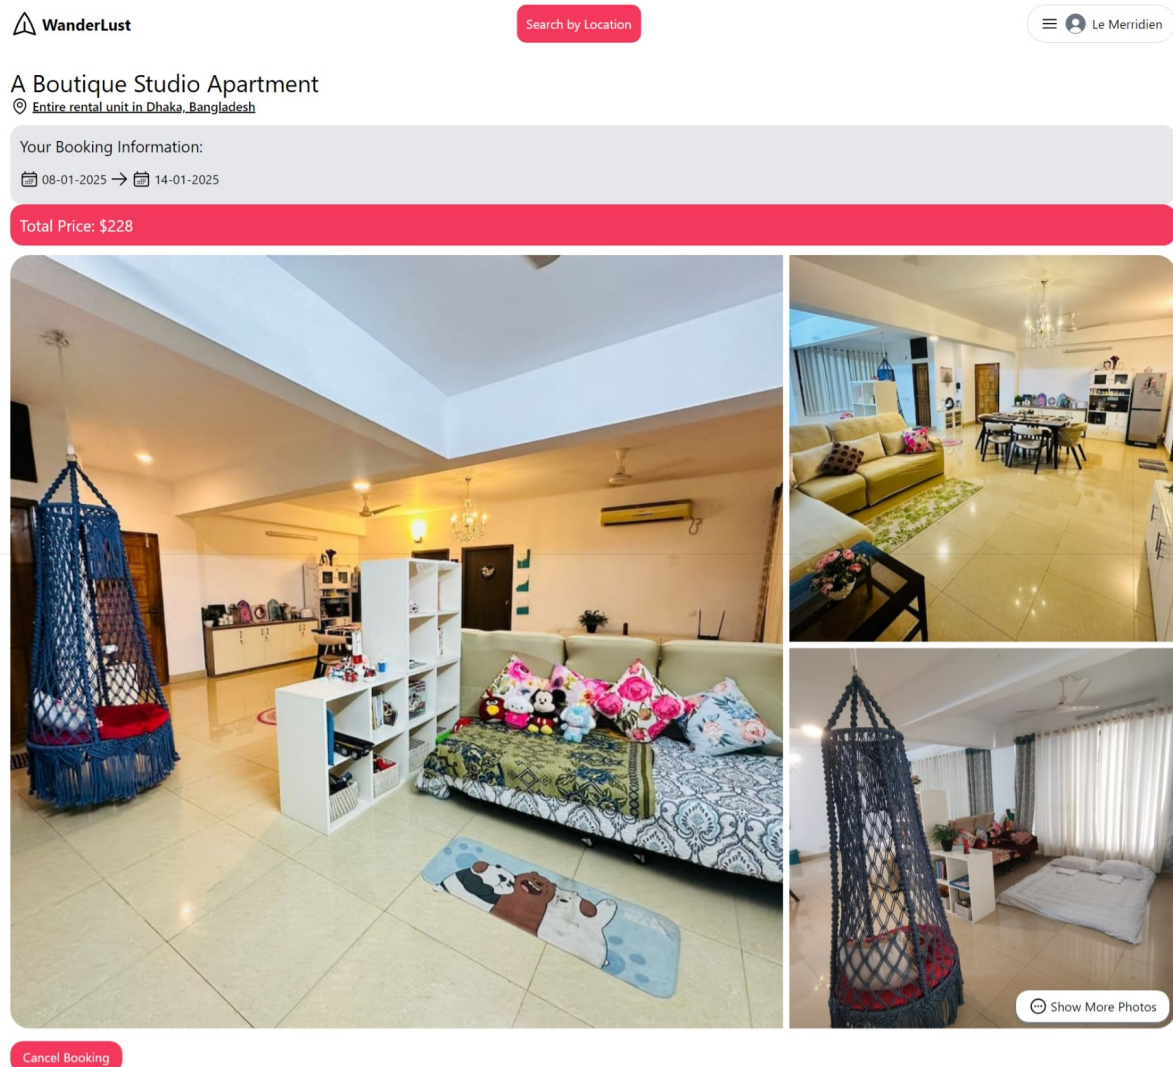

Figure 10: Booking Confirmed Page

5 Main Differentiator

The main difference between my website, WanderLust, and other hotel booking platforms like Booking.com, Agoda.com, and Trivago.com is that those websites do not allow individual users to list properties. However, on WanderLust, any registered user can list a single apartment, as well as large hotels, providing more flexibility in property listings.

6 New Feature: Filtered Search Functionality

A new feature has been integrated into the WanderLust platform: **Filtered Search**. This enhancement significantly improves the user experience by allowing travelers to refine their accommodation search results based on specific preferences.

Key Functionalities

- Users can now filter search results by:
 - Price range
 - Number of guests
 - Availability dates

- Amenities (e.g., Wi-Fi, air conditioning, pet-friendly, parking)
- Filters can be applied on the Search Page after entering a destination or location.
- The page dynamically updates the displayed results based on the selected filters, providing a tailored browsing experience.
- If no results match the applied filters, a message stating **No results found** will appear.

Benefits

- Enhances usability and user satisfaction by offering a more personalized search experience.
- Helps users quickly find properties that meet their exact needs, reducing the time spent scrolling through irrelevant listings.
- Empowers hosts to better highlight unique amenities and features of their properties.

7 GitHub Upload

This project is uploaded to GitHub using these following commands:

```
# Initialize Git in my project directory
git init

# Add all files to the staging area
git add .

# Commit the files with a meaningful message
git commit -m "Initial commit for WanderLust project"

# Create a new repository on GitHub named 'WanderLust'
# Linking local repository to the remote GitHub repository
git remote add origin https://github.com/RafinEazdan/WanderLust.git

# Push the local repository to GitHub
git branch -M main
git push -u origin main
```

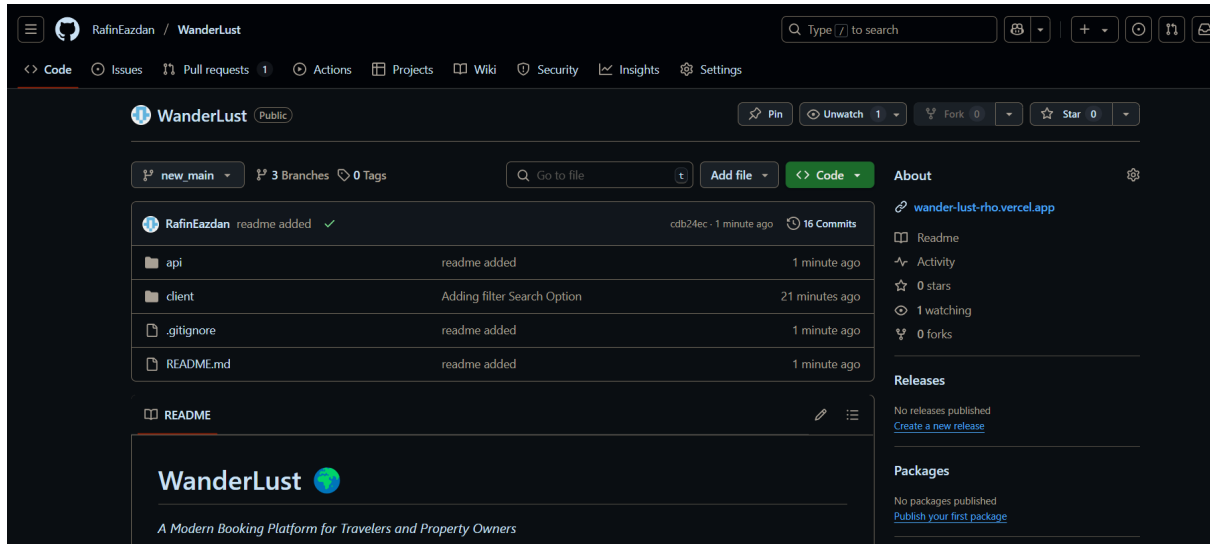

Figure 14: Github Repository

8 Technology Stack

8.1 Backend

The backend is powered by modern technologies, ensuring robust and secure handling of user data, property information, and bookings. Technologies used include:

- JavaScript
- Node.js
- MongoDB for NoSQL database management
- Express.js
- Bcryptjs for encrypting password
- Dotenv for managing env files
- Cookie-Parser is used to parse cookies attached to the incoming request object.

8.2 Frontend

The frontend is designed to provide an intuitive and responsive user interface. Technologies used include:

- HTML
- Tailwind CSS for styling
- JavaScript
- Vite
- Yarn instead of NPM for better performance while installing packages

- ReactJS
- React-router-dom
- Axios

9 Conclusion

WanderLust connects travelers with property owners, offering a wide range of accommodations from low-cost stays to luxurious retreats. It improves the vacation experience by providing a user-friendly platform that allows hosts to maximize the potential of their properties.
