

Static vs Floating Static vs RIP

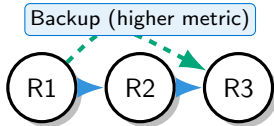

Type	Reliability	Ease of Setup	Ethical Considerations
Static	High (manual)	Easy (small nets)	Keep routes updated; avoid stale paths
Floating Static	High (with backup)	Moderate (priorities)	Don't abuse metrics to prefer unfair paths
RIP (Dynamic)	Adaptive (changes)	Simple, scalable	Secure updates; prevent false adverts

Static

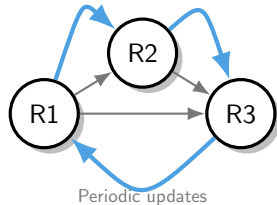

Manual paths

Floating Static

RIP

Best Practices & Outage Prevention

Polling/SNMP/NetFlow

Thresholds & logs

Redundant links

Change control

Monitor routing tables

Detect anomalies early

Alert on change/drift

Trigger automation

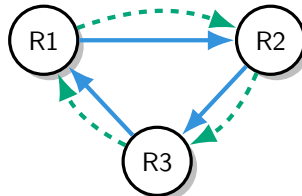

Failover to backup

Minimize downtime

Review & audit

Close the loop

Primary + Backup

Encrypt dynamic updates;
document static routes
